

EIGHT CONCERNS — AND WHAT EACH PHASE IS JUDGED AGAINST

arrows are declared priors, read from each phase's rule set — not a processing order

WHY THE SEED IS CITED, NOT CARRIED

Carrying the seed forward would mean a register and a carry rule in each intermediate phase, restating what the seed already says — and free to drift from it. P5 reads the seed so a substituted subdomain purpose has to be declared; P6 reads it because the span of a change is whatever the seed's classifications name, and an unowned touched subdomain must be caught.

WHAT THE DECLARED STRUCTURE RECORDS

- no intent phase declares an analysis phase as a prior — a declared property, not a closed input surface
- a later phase declares which earlier concerns it consumes, and the citation is checked
- P7 declares P6 as a prior and carries its refusal discharge — design cannot precede permission
- P8 reconciles with P7 exactly — the mandate orders the design rather than restating it

*The agent may perform the reasoning in every phase; no phase grants it authority to redefine the concern an earlier phase established.*

Register and rule counts read from the templates and each phase's rule set at the pinned revision. Counts describe size, not importance.
