

THE BOUNDARY IS SET BEFORE THE AGENT ACTS

OUTSIDE THE SURFACE — NOT THE AGENT'S TO MOVE

- **redefine the scope**— declared; not exercised
- **author the profile that governs it**— declared; profile is an external input
- **enlarge the governed surface**— declared; not exercised
- **promote a candidate**— no promotion operation exists (§5.5)
- **write to the sealed baseline**— identity comparison + wrong-baseline refusal
- **supply behaviour the seal does not carry**— observed for the exercised case

*The agent is powerful inside the construction process
and powerless over the governing boundary.*

The withheld set states architectural intent. The annotation on each item names its mechanism;
§8.2 reports which were exercised. The containment shown is architectural intent, not an empirical result.
