

EXECUTION REALIZES; IT DOES NOT DETERMINE

WHAT EXECUTION DOES

- reads the sealed baseline
- admits at the boundary only what the baseline permits
- follows the behaviour already determined there
- emits only declared outcomes

WHAT EXECUTION CANNOT DO — FIVE SEPARATE PROHIBITIONS

- infer behaviour the baseline does not carry
 - create a route
 - supply a default
 - change governance
 - modify the baseline
- stimulated by the reported case · ○ declared, not stimulated
Each needs its own stimulus; one traversal is not evidence for five.*

TWO BOUNDARY CASES

an unauthorized state
corrupted snapshot · unresolvable binding
REFUSED — a declared outcome

rollback
a governed transformation to a prior baseline —
available only where that baseline is retained;
retention is required, not provided

Refusal is a declared outcome, not a new determination.

The agent has left the loop entirely. No producer acts here, and nothing here confers authority.

The five are prohibitions of the execution model. §8.2 reports which the exercised case bears on.
