

FOUR CONCERNS, NOT FOUR NAMES FOR ONE SPECIFICATION

THE MODEL IS IN THE ARTIFACTS, NOT IMPOSED ON THEM

P8’s distinctive registers introduce scheduling concerns P7 does not express, and no P8 register reproduces a P7 design register. The mandate does not restate the design — it orders what the design determined.

Natural-language reasoning can traverse all four concerns; it does not thereby acquire authority over any of them.

An agent may author every register above. Authoring one confers no authority over the concern it records.

* Register counts are properties of this implementation at the pinned revision, and describe size rather than separation.
